

ZAIN UL ABIDEEN

Full-Stack Developer | CS Student

Islamabad, Pakistan • zaynbu269@gmail.com • github.com/ZAYNINFINITY • linkedin.com/in/zain-ul-abideen-429735231

PROFILE

Computer Science student with hands-on experience building full-stack and cross-platform applications across frontend, backend, and databases. Independently ships projects from idea to working implementation, including database design, API integration, and deployment. Currently developing a real-time SaaS collaboration platform using the MERN stack with OAuth authentication, real-time messaging, and Kanban task management.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), C++, Python, PHP

Frontend: React.js, HTML5, CSS3, Tailwind, Responsive Design

Backend: Node.js, Express.js, Flask, REST APIs, Socket.io

Databases: MongoDB, MySQL

Auth & Security: OAuth 2.0, Passport.js, Session Management

Tools: Git, GitHub, Capacitor, XAMPP, phpMyAdmin,

Concepts: OOP, Data Structures & Algorithms, Real-Time Systems, API Design

EXPERIENCE

Web Developer & Venture Intern | **TEKNEFY (Robotics World)** July 2025 – September 2025

- Contributed to web development tasks and feature implementation within a cross-functional team
- Participated in debugging sessions and code reviews, applying professional development practices

PROJECTS

Collaborative Workspace Platform — Node.js · React · MongoDB · Socket.io · Chakra UI

- Built a full-stack real-time SaaS platform with live chat, document collaboration, and Kanban board with drag-and-drop task management
- Implemented OAuth 2.0 authentication (GitHub + Google) via Passport.js with bcrypt password hashing and session management
- Designed 20+ RESTful API endpoints and 15+ React components; achieved 75%+ test coverage across backend and frontend

Queue Simulator — HTML · CSS · JavaScript · Python (Flask) · SQLite · Capacitor

- Built an interactive cross-platform queue simulation app with a Python/Flask backend and SQLite database
- Packaged with Capacitor for multi-platform deployment across web and mobile

Car Auction Management System — PHP · MySQL · HTML · CSS

- Designed relational database schema and implemented backend logic for auction listings, bidding, and user management
- Integrated frontend with backend end-to-end, handling CRUD operations and data integrity with MySQL

Budget Tracker — C++ · OOP

- Built a personal finance tracker in C++ using OOP principles; extended from CLI to a GUI version

EDUCATION

BS Computer Science | **Pak-Austria Fachhochschule (PAF-IASST), Mang, Haripur** 2024 – Present
